

FIELD & TRIAL

GRAIN FREE CHICKEN & SWEET POTATO

DESCRIPTION

Skinner's Field & Trial Chicken and Sweet Potato is a complete, grain-free dog food, specially developed and formulated to support active dogs who are regularly working at a moderate activity intensity. Skinner's Chicken and Sweet Potato has been carefully developed to support the energetic requirements of a range of active dogs, while removing grain-based sources of carbohydrates.

This may be of benefit to those dogs with sensitivities or intolerances to grains such as wheat, maize, barley or oats.

Skinner's Chicken and Sweet Potato has a protein level of 25% to support muscle integrity and a fat level of 13% to support the energetic requirements of a range of active dogs, such as working gundogs, agility dogs and active pet dogs. A blend of sweet potato and potato provides a digestible source of carbohydrate to also support activity. Skinner's Field & Trial Chicken and Sweet Potato is an ideal dietary choice to support the day-to-day requirements of active dogs

PREPARATION & FEEDING

It can be fed straight from the bag or, if your dog prefers, moistened a few minutes before serving with a small amount of tepid water.

Please refer to our feeding guide for the amount most suitable for your dog.

Nutritional requirements of dogs can vary according to their activity level, gender, age and breed.

activity level, gender, age and breed.
